

Emsculpt Neo is the newest and first in this class technology that emits synchronized Radio Frequency (RF) heating to eliminate fat and uses High Intensity Focused Electromagnetic energy (HIFEM) to build muscle at the same time within 30 minutes sessions.

The Radio Frequency (RF) increases the temperature of the tissue and causes apoptosis or degradation of fat cells that are slowly absorbed by the lymphatic system.

The High Intensity Focussed Electromagnetic energy (HIFEM) contracts the muscle fibers at intense levels that causes an increase in the number of muscle fibers and cells over time.

Frequently asked questions FAQ's

How frequently can you use Emsculpt Neo?

Emsculpt Neo is usually 30 minute sessions, done weekly, up to 4- 6 sessions for each area of the body.

How long does it take to see the results from Emsculpt Neo?

Each individual's result may vary, but typically results can be observed in 10 to 12 weeks.

What areas of the body can be treated with Emsculpt Neo?

Emsculpt Neo can be used on abdomen, thigh, calves, arms, and love handles.

What to expect during an Emsculpt Neo session?

You can expect to feel intense muscle contractions, along with heating sensation in the treated area.

What is the downtime after the Emsculpt Neo sessions?

There is no downtime with Emsculpt Neo.

Is this a weight loss therapy/treatment?

No, Emsculpt Neo is not a weight loss treatment. It helps reduce the fat and builds muscle.

How much increase in muscle volume is expected?

You can expect up to 25% growth in muscle volume after 10-12 weeks.

How much does it cost to do Emsculpt Neo treatment?

Your provider will help create a tailored treatment plan and provide information about financing options.
